Gardens Theatre

Technical Specifications

07/04/2017

Senior Theatre Technician:

Phone number:	Andrew Earle 07 3138 4464
Mobile number:	0417 218 325
Email address:	andrew.earle@qut.edu.au

Theatre Technician:

	James Millis
Phone Number:	07 3138 7038
Mobile Number:	0432 392 031
Email Address:	james.millis@qut.edu.au

Venue:

Phone number:	07 3138 7750
Fax number:	07 3138 2175
Website:	www.gardenstheatre.qut.edu.au

PLEASE NOTE:

There is a height restriction of 3.5m exiting Gardens Point Road due to an overpass bridge onto the freeway. Any vehicle over 3.5m will need to exit via the “in ramp” and this will require traffic control.

Please inform the Senior Theatre Technician as soon as possible if this will be necessary.

For the health and wellbeing of all our students, staff and visitors, we are a smoke-free university. All staff, students, visitors, volunteers and contractors who come on to QUT campuses will need to adhere to the smoke-free policy.

STAGE

Brief Stage Description:

The stage is not raked and has a proscenium arch with flying facilities. The stage floor is hardwood covered with masonite sheets. Screwing into the stage surface is permitted, but larger holes must be authorised by the Senior Theatre Technician.

There is a pretend stage crossover behind the last US fly line.

The orchestra pit at the front edge of stage is a single full stage width serapid system that can be locked off at any height.

Stage distributed load limit **Distributed load 7.5Kpa (1Kpa is approx 100kg/m2)**

Stage point load limit **4.5Kpa**

Proscenium: Width **12.78 m** Height **6.15 m**

Setting Line: Back edge of proscenium opening

Stage Dimensions:

Distance From (*SL = Setting Line, CL = Centre Line*)

SL to DS edge of Orchestra Lift (apron)	4,847mm
SL to DS edge of forestage	1,465mm
SL to first fly line	430mm (H/C) 735mm (line1)
SL to last upstage fly line	8,995 (line27)
SL to rear wall	10,020mm
CL to OP wall (or obstruction)	8,250mm
CL to PS wall (or obstruction)	11,050mm
Stage to underside of grid	15,000mm (varies 14,900 to 15,117)
Stage to underside of I-Beam (Loft Block)	16,000mm

Overhead obstructions

At the top of the proscenium on PS and OP there are two truncated corners imposing on the opening, see the sections drawings for more details.

Stage Covers: Black Harlequin Dance Floor (8 x 1.5m x 12m rolls)

Stage Traps: None

Safety Curtain

Fire Curtain **Water curtain**

Distance from setting line **0.00mm**

Note: Measurement is to the downstage edge of the Fire Curtain

Orchestra Lift / Pit

Full stage width motorised orchestra pit on Serapid system.

Set positions for orchestra lift where lift at auditorium level is 0mm

Stage level at **1070mm** above auditorium

Orchestra pit level at **3m** below auditorium

Lift can be set at any height **YES**

SWL of orchestra lift **8 tonne dynamic/ 12 tonne static WLL**

Dimensions of the orchestra pit **12.78 x 3.38m**

Orchestra pit maximum capacity, **this will be dependent on the needs of the show, use the dimensions shown above to calculate your required work area.**

Auditorium

The raked seating bank has 397 seats (25 per row) with eight removable wheel chair seats (four in the front and back rows).

Seating capacity with additional Orchestra lift/pit seating installed **450**

Seating capacity without Orchestra lift/pit seating installed **397**

Fly System

Counterweight single purchase handline

Details:	Operating Position	OP stage floor

Access Equipment

Elevated Work Platform: JLG 20MVL

EWP Restrictions: Operators must have a EWP ticket and be familiar with this model MVL

Ladders: 1m fibreglass A frame
2.4m alloy A frame
3.6m fibreglass A frame

Loading Dock

The Gardens Theatre has two loading docks each capable of holding one 6 to 8 tonne truck. The main dock is rear entry unloading and the other side unloading only. There is **NO** additional parking for trucks other than the loading dock areas.

PLEASE NOTE: There is a height restriction of 3.5m exiting Gardens Point Road due to an overpass bridge onto the freeway. Any vehicle over 3.5m will need to exit via the "in ramp" and this will require traffic control wardens at an additional cost. Please inform the Senior Theatre Technician ASAP if this will be necessary.

Main Loading Dock: Height **300mm** Door **2.8 m** high x **2.9 m** wide

Parking Area: Approx **3.5 m** Wide x **10 m** Long

Side Loading Dock: Height **800mm** Door **3.6 m** high x **3.3 m** wide

Restrictions / Obstructions

Dock offset to theatre, extreme long loads may need to go in through the side loading dock door.

LIGHTING.

Stage LX Bars Movable (See hanging plot for standard LX bar locations)

Orchestra Bar 1

Setting Line to lighting bar **1.4m**
Usable bar width **10m**
Notes Trim height 6400 on chain motor

Orchestra Bar 2

Setting Line to lighting bar **3.4m**
Usable bar width **10m**
Notes Trim height 6980 on chain motor

FOH Bridge #1

Setting Line to lighting bar **10m 40 deg**
Usable bar width **12m**
Notes

FOH Bridge #2

Setting Line to lighting bar **14m 28 deg**
Usable bar width **12m**
Notes

FOH Perches (PS & OP)

Setting Line to FOH Perch **4m and 7.5m**
Distances are to the highest downstage point of boom or perch.
Maximum lanterns per perch **7 etc s4**

Setting Line to FOH Boom
Distances are to the highest downstage point of boom or perch.
Maximum lanterns per boom

Control: Lighting desk **ION 2000 console**
Control channels **2000**
Signal output **DMX**
Signal distribution **5 pin cable**
Remote riggers available onstage **Radio remote focus unit**

LSC GenV1 Dimmer Racks: Total Dimmers **216**
Bridge 2: **24 x 2.4Kw**
Bridge 1: **36 x 2.4Kw**
Stage: **156 x 2.4Kw**

House Lights: Independently controlled with preset fade times from the biobox and P corner.

Patching:

Location	Quantity	Numbering (PS to OP)	Detail / Accessories
Bridge2		313-348	36 patch points (Bridge 2)
Bridge1		13-48	36 patch points (Bridge 1)
Orchestra truss 1		1-24	24 patch points (Patch Floor Stage)
Orchestra truss 2		25-48	24 patch points (Patch Floor Stage)
Stage dips		221-280	60 patch points (Patch Floor Stage)
Slots		49-84	36 patch points (Bridge 1)
Perch		85-108	24 patch points (Bridge 1)
Overheads		109-220	112 patch points (Patch Floor Stage)
LX5		1-24	24 patch points (Patch Floor Stage)

Power:

3 Phase Outlets:

- 3 x 40 amp Bridge 2
- 4 x 40 amp Bridge1
- 12 x 40 amp Dimmer Floor
- 2 x 50 amp Dimmer Floor
- 1 x 40 amp Stage level (SL wing)
- 1 x 40 amp under stage (SL)

Cabling:

240v Extension Cable:

The theatre has a good stock of extension leads to accommodate the venue's standard Lighting rig. Any additional equipment will require additional cable stock to be sourced.

Looms:

- 6 x 5 way weilands 20metre
- 6 x 5 way weilands 30 metre

3 phase Extensions:

- 2 x 10m 40amp extension
- 2 x 20m 40amp extension

Lighting Notes:

Always call to find out what stock has been set aside for productions or repair.

AUDIO

Control Positions: **Bio box** (Back of auditorium above seats on next level) is acceptable for most mix, though sound is attenuated by 9dB

Auditorium Centre back row but reduces capacity by **8** seats (max)

Control & Amplification:

Primary Mixer: Soundcraft MH3 (32 channels, 4 stereo, 12 aux, 8 groups and LRC o/p)

Secondary Mixer: Yamaha DM1000 (Digital)

EQ: 4 x dbx 2231
1 x Klark Teknik 3600DN for FOH

FX: Yamaha PRO R3

Compression / Limiter / Gates: On desk (DM 1000)

Speakers:

FOH Speakers: Meyer MTS4A (L&R)

Rear Speakers: 2 x D&B E3 (with D6 amplifier)

Foldback: 3 x Martin LE350 (with 2 x QSC MX Series amplifier)

Playback:

CQ(#) = Camera / Switch Cue
SHQ(#) = Manual Shutter Cue

VISION CUE SYNOPSIS

Breaking the Code by Hugh Whitmore
Directed By David Bell

Q#	Scene	Page	Cue Name	Cue Placement	Description	Content	Program Output	Surface
DOORS	post	-	Run Post Show	Upon FOH Clearance	Power down, save and re-arm cue		Qlab	Op Display

Notes:

- All Surtitle Sequences Run for 18 Seconds
- all switch cues / camera cues are switched at the ATEM Switcher
- Prior to and following all vision cues appropriate shutter open and close cues are triggered
- Manual shutter cues are as listed and are trigged from the Qlab File
- power-up sequence requires operator to select appropriate cast member for the performance, this will arm the correct cues and sequences for the show.
- power-down autosaves show files and powers down projectors and show computers.
 - All content is labelled with a prefix of 2017_QUTActing_BTC_FileName

Scene	Page	Q#	Input	Angle / Shot	Cue Point	Notes	Output	Transition

EQUIPMENT LOAN REQUEST

Z9 Level 1 EQUIPMENT LOANS CENTRE

Conditions of Loan

(OFFICE USE)

COMPLETED FORMS ARE TO BE SUBMITTED TO TECHNICAL STAFF NO LATER THAN FIVE (5) WEEKDAYS PRIOR TO THE PICKUP DAY.

ALL COMPUTERS MUST BE BOOKED SEVEN (7) WEEKDAYS PRIOR TO THE PICKUP DAY.

BOOKING FORMS MUST BE SUBMITTED VIA TWO METHODS. (1) DOWNLOADED FILLED OUT AND EMAILED TO cif-ts-theatre@qut.edu.au OR (2) FILLED OUT, PRINTED AND HANDED IN TO THE Z9 LEVEL 1 ELC.

Conditions of Equipment loan:

- All requested equipment is listed on the loan form. A request doesn't guarantee access to the equipment.
- QUT Technical staff must be notified if there is any damage or missing components upon receipt.
- The hirer is responsible for ensuring the equipment is operated by competent persons and is utilized in a safe manner.
- The equipment must not be used for purposes other than specified by the manufacturer.
- The equipment must not be utilized outside of the conditions listed above ('Conditions of Loan').

I, _____ (PRINT NAME) hereby agree that the equipment loaned to me by the university is to be utilized in a responsible manner, as per the conditions set out in the Equipment Loan Request. Any loss, damage or theft of property obtained from the university is my responsibility.

		Version	02- Mon Jul 17 2017		Document	BTC Archival Schematic V2
				Page 1 / 1		

Purpose:

The Purpose of the Archival System on QUT shows is to create a completely accurate, functioning recording of the performance which could be used to either re-mount the production in future years, provide feedback on show calls and execution of show related duties and serve as a general preservation of the production process.

In addition to this component of archival, is to maintain an accurate record of all finalised paperwork used in the creation of a production.

For context; in the professional industry this archival would be used to remount (re-create) the creative work at a later date.

Show Archival

To Conduct an appropriate archive of the production you must first determine what it is you wish to capture and what resources you have at your disposal to do so.

There are three main components of the production process which should be captured.

Two possible system schematics are attached below.

Audio:

A mix down of all sounds including Qlab and playback content as well as live dialogue and stage atmosphere.

To complete this; liaise with the sound department to arrange for a matrix split out of the desk. This can be as simple or complex as you like.

IE: two stereo XLR outputs into a minimum two channel audio interface then into a Digital Audio Workstation (DAW) or a full Dantè split into a DAW for a mix down in post production. If the show is not being mic'd at least one input should be of a stage feed to capture room ambience. Below are some suggested methods for capturing ambience and show audio.

The Loft / Studio Spaces or shows without full Miking and mix down capabilities

The use of Two High Quality Pencil Condenser microphones in a XY Position at the rear of the audience position

Gardens Theatre without full Miking and mix down capabilities

The use of Two Two High Quality Pencil Condenser in a XY Position at the FOH Stalls Mix Position (audience level), but out from underneath the balcony.

Shows with full mix down capabilities.

Dante Feed / Matrix Output and a High Quality Condenser microphone in a Hyper-cardioid polar pattern at the rear of the audience / in the stalls.

If not using Dantè, the Record Matrix from the Audio Console should be pre-fader, time should be taken with the audio operator to send appropriate levels of each source (content, microphones etc) to the audio interface.

Export all audio recordings at 48,000 KHz 24 bit.

Some suggested audio schematics are available on the google drive.

Vision:

A recording of the show from the audience's point of view often cut together with an additional side or medium angle'd shot. Traditionally this is done via two MC50 Camera's loaned from the Z9 Equipment Loans Centre or additional cameras at your disposal

Additional GoPro's or other cameras from Crew are placed around the theatre to capture additional moments of the production process and can be overlaid across the show call or be used in separate files for Technical Production Showcase.

Communication / Show Call

The capturing / recording of the Deputy Stage Manager's show call and associated communication / talkback conversations relevant to the show. This can be done by placing a audio recorder into a comms pack or obtaining a link out from the venue.

- QUT Garden's Theatre has a ¼ inch to 4 pin XLR cable made for linking out of the Comms System into a DI then into an interface or recorder this can also be taken from the Comm's output in the Bio Box under the Audio Console.
- The Loft has RJ45-XLR cable that is made to go into an audio recorder
- if you are using a digital audio console setup or you are in Z9, you can obtain a Dante send straight into your computer's preferred D.A.W.

Troubleshooting

If you are having trouble with the audio connection consider the following

- The Use of a ground lift / DI will assist in reducing overall buzzing and clipping of recordings
- ensure you are using correct cabling and are connected to the correct ports.

Photographs & Video Content

The capturing of the Production process, following a dedicated shot list listed within this document as well as other relevant, appropriate photographs

All content should be recorded at a minimum of 720p at 25fps

As previously mentioned, additional cameras can be used to capture alternative angles and perspectives which can be overlaid in post production.

Non Show Footage / Photographs.

Every effort should be made to collect the appropriate footage and photographs listed below in addition to other appropriate photos from the process.

These photos and content footage should be edited down, compressed to the relevant footage and images to reduce the amount of data added to the Technical Production Hard Drive show folder and the QUT Digital Collection folder All non relevant footage and photos should be removed.

When editing video sequences together to present the overall production, consider using royalty free / creative commons music, widely available online to accompany selected videos.

A Note On Time lapses:

The aim of the time-lapse is to provide a quick overview of the entire process.

The QUT standard time lapse is a photo every 30seconds.

The final submission should have all time lapses merged into a single video.

ARCHIVAL PROCESS

Schedules and Process:

working from the Production Schedule write a list of what you are wanting to capture and what each of your cameras will capture. For the performance season, list each of the camera angles for the performance that you are capturing.

Capturing a performance:

Advise the company over comm's that recording is about to commence.

Across all recording devices; begin filming / recording as close to the same time as possible.

Once rolling; clap loudly to sync audio between all sources as this will allow synchronisation in post production.

Combination:

In your preferred post production editing software import all content to the workspace.

Using a time align / audio sync function align both camera angles, your audio source or interface and the comms recording for that session, additionally, if you have a multi-camera setup to cut between, do this step here.

An example of how to do this in Final Cut Pro can be found here [YouTube](#) [Lynda](#)

An example of how to do this in After Effects can be found here [YouTube](#) [Lynda](#)

An example of a single angle and overlay show call can be found here - [YouTube](#)

A title card should start the document listing , Show Name & #, Date, Location, Video Title, Director / Choreographer and Video Editor

Complete a multicam archival or edit and render from the raw data. Once exported discard the raw data.

Depending on your camera choice the average file size of a full length show can be up to 25gb to retain high quality.

Exporting

Export where possible, all content to it's highest quality format in a .mp4 format as this allows content to be viewed across both mac and windows platforms.

Compressing to a .264 format will maintain high quality whilst reducing the overall size of the file

Export a copy of the final show with Comm's recording underneath.

Place these videos into the QUT Digital Collection Folder and into the Production's Archive Folder for the Production and place the Production folder (detailed below) onto the Technical Production Harddrive.

The archive recording and any important resources should then follow the process of the digital collection.

All photos in the digital collection should be combined into a video slideshow and exported as a video to be added to the QUT Digital Collection.

Depending on your camera choice the average file size of a full length show can be up to 25gb to retain high quality.

Once you have rendered down all content; delete your raw data and have your finalised export show call and montage video

A general Adobe Media Encoder Template has been created for file size and can be found on the google drive [here](#). This can be imported into Adobe Media Encoder to setup your output to the correct settings

Paperwork, File Structure & Naming Conventions

To ensure consistency across all departments, and in good workflow practice. The following File Formatting should be followed across all finalised paperwork and content used in the production. This should read as follows.

YYYY_QUTDepartment_ShowPrefix_DocumentorFileName_Version# (.content)

Distribute this to the entire company early on to have them use the naming convention

Where:

YYYY is the Year

Department: is the Department the show is being put on for (Dance, Drama, Acting)

Prefix: is the Email Prefix of the Show

Document / Content Name: The Name of the File

Version: the Version Number

Paperwork Example;

2017_QUTActing_BTC_ArchivalProcessDocument_v1

Content Example:

2017_QUTActing_BTC_SnowWhite_v1.mov

Database:

A finalised folder containing all files is to be submitted to the Technical Production Hard Drive. The File structure looks like the following. This file format can be downloaded as a template as well as the installation of a program called Post Haste. The Template can be downloaded from [here](#) although it is also available on the Google Drive.

A template also exists for content management for any media you capture whilst editing.

You should actively be working to collect finalised documentation, discuss with the

Production Stage Manager appropriate methods to obtain all paperwork.

A list in this document contains a base list of all paperwork to be collected.

QUT Digital Collection

Technical Production Digital Collection is an archival of QUT Bachelor of Fine Arts - Technical Production students work on performances and events across a variety of disciplines including Dance, Drama, Acting, Fashion and special events.

This digital collection, through photographs, technical drawings and videos demonstrates the final stages of the production process being undertaken including technical work in; design, rigging, focusing and rehearsing the performances as well as a complete full run of finalised performance. Each performance archival is accompanied by the show call which provides a running commentary of the sequences being undertaken to execute a performance.

This collection is an ongoing collaboration between Technical Production staff and students. Initial Project development; Carly O'Neill, Anthony Brumpton, Jill Rogers and Dale Norris.

Finalised Show Archival recordings as well as significant Edited Montage Videos, Time lapses, and Technical Drawings are to be added to the QUT Digital Collection in consultation with QUT Technical Production Staff.

All photos should be combined to a single video slideshow and exported to a single video. This is to be done, by completing all videos, editing them down and placing them on to the technical Production Hard Drive in the shows relevant Archival Folder and a folder for the digital collection.

For each item being added to the Digital Collection, appropriate data must be added to the MetaData spreadsheet located on the hard drive / google drive. Data formats should follow the guide listed on following page. the spreadsheet can be found here: [Google Drive](#) Once this is completed; liaise with Technical Production staff to add the content to the collection.

Digital Collection MetaData Table Breakdown

Heading	Content	Notes
File	The Document File	Labeled as per previous naming conventions
Type	File Format e.g. Video, Photo, PDF Document.	Choose the appropriate Item Type from a list located on the Google Drive here
Creators Name Given	Your Last Name	
Creators Given Name	Your First Name	
Title	Title of the Resource being added	
Keywords	searchable key words for the collection	Copy and paste the example listings and add relevant keywords such as the show name
Notes	any relevant notes about the item being added	
Abstract	One sentence describing the resource being added	
Date	Date the file was completed	
Publisher	Traditionally Queensland University of Technology	
Copyright Owner	The Owner of the Copyright of the work. If it is a new creation, make it "QUT Technical Production" if you are publishing an already copyrighted resource, be sure to list them here.	
Copyright Statement	© QUT Technical Production (Year)	if you are publishing an already copyrighted resource, be sure to amend the copyright statement to reflect the work.
Location Country	Australia	change if in a different location
Location Region	Queensland	change if in a different location
Location City	Brisbane	change if in a different location
Location Place	QUT, The Location	Changes by location; I.e. The Loft, Gardens Theatre etc

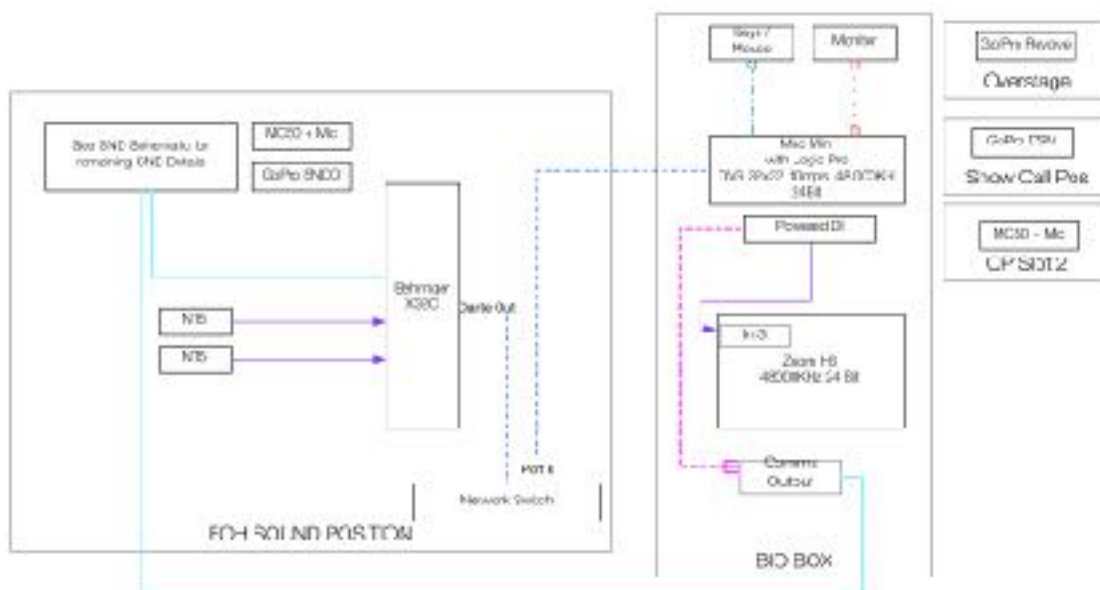

* Note this is an example and all equipment can be substituted.

Please note:

This Archival Process was developed and last updated in August 2017.

Slightly process's and protocols may have changed.

Current Versions of:

Final Cut X is 10.3.4

Adobe Premiere / Media Encoder is CC 2017 (11.1.2) / April 1, 2017

Post Haste: 2.6.1

This process will continue to change and develop as technologies continue to progress.

All mention of specific equipment of techniques are subject to change in availabilities of equipment that QUT Technical Production students have access too.

All paperwork and schematics / equipment lists are examples and are to be adapted and scaled to suit the needs of the production.

Final Submission

You will submit two things to the Technical Production Hard Drive, place the following in a folder you create for the Production (Place in the correct year and create a folder if necessary)

1. The QUT Digital Collection Folder (detailed earlier in this document)
 - Show Call Video
 - Montage Video
 - Photo Slideshow Video
 - Any Abstract or interesting paperwork in consultation with Technical production Staff
2. The Production Folder (detailed earlier) - with a copy of all paperwork, show files and the edited show call, and montage videos
 - All Paperwork as per the process outlined on page 5
 - Show Call Video
 - Montage Video
 - Photo Slideshow Video
